SOURCES AND METHODOLOGY

Baseline Population:
The basin-level population counts are based on the 1990, 2000, and 2010 Census. Block-level population figures have been aggregated to each basin by GCR.

Ten- and Twenty-Year Projections
These projections were developed throughout the fall of 2010 by demographic analysts at GCR. They are based on recent property-level occupancy trends, analysis of planned residential development projects, and major institutional expansions in each neighborhood throughout the city. These estimates from 2010 were updated based on the rate of growth witnessed between the spring of 2010 and the spring of 2011. This estimated rate of growth from 2010 to 2011 and the estimated 2011 population figures were deduced from indicators of residential occupancy.
